

LSAI Air Canister & Equipment Use Policy

LSAI Labs canisters, accessories and equipment are provided for the collection and transportation of air samples to be analyzed by LSAI Labs only and must be returned to LSAI for analysis after collection. The canisters and equipment is the sole property of LSAI Labs. LSAI’s loan of the canister and equipment assumes that all canisters will be used for sample collection only and returned promptly, within 5 days. Canisters that are returned without an analysis will be assessed a minimum rental charge (\$50 minimum) and a cleaning and re-certifying fee (\$50) per canister. Canisters should be returned within 5 business days unless other arrangements have been made. Extra charges for canisters kept longer than 5 business days may be assessed at \$50/week, per canister.

1. LSAI will certify that the canisters are clean and working when delivered, along with any accessories requested. Please confirm at delivery that all the canisters and equipment is complete and undamaged. If there is damage or loss, notify us immediately and return the equipment, we will send you replacement equipment.
2. Canisters and equipment will be available for pick-up at our laboratory, or can be shipped by 2nd day delivery at no additional charge. Return shipping is the responsibility of the client. Expedited delivery is available for an additional fee.
3. The canisters and boxes should not be defaced or damaged in any way. Do not use tape, markers or labels on the canisters or equipment. Each canister has a unique code for identification and there is a tag attached to each canister which can be used for labeling. Defacing the canister will incur additional charges of \$50.
4. Canisters are for sampling VOCs air only. Any other use is prohibited. Exposing the canister to reactive gases, stack emissions, acids and sulfur compounds will damage the interior of the can and equipment. The client will be assessed the replacement cost of cans and equipment damaged in this manner.
5. The equipment is not to be disassembled, adjusted or changed in the field. This will affect the integrity of the sample and may damage the equipment.

Item	Charges	Note
